a·tune
a Transnet**YX** Company

Accelerate Deployment, Reduce Costs, and Streamline Functions

a-tune makes IT simple for research-driven organizations, especially when it comes to solving complex data and systems challenges. Our enterprise applications centralize information from siloed systems, provide real-time access to data, identify application performance issues, and more.

a-tune also provides certified IDBS experts with deep experience and domain knowledge in R&D data management and the IDBS product suite. Since 1999, we've helped leading organizations get more from their IDBS investments with up-to-date product proficiency and unmatched support.

a-tune's Enterprise Applications

Archive.Manager
Manage and archive experiments in E-WorkBook with options to suit every need (integrate with Project Lifecycle tools, align E-WorkBook & project status, remove outdated information, manage archive access, publish data to document management systems and data warehouses).

E-Workbook.Deployment
Transfer and deploy templates across environments, databases and versions with efficiency and control. Import data from legacy systems into E-Workbook easily and accurately.

File.Manager
Enable secure external file storage and management (e.g. Amazon S3, Azure, SDMS, SharePoint) and file shares (e.g. NAS, WebDAV) with E-WorkBook. Data.Manager maintains file location and requires only a configuration update if the storage location or technology changes.

Catalog.Inspector
Identify where catalog terms are used and eliminate manual template checks. Assess the impact of proposed changes to a catalog term and prevent errors that result when a term is changed without considering others who use it.

Chemistry.System.Integration (CSI)
Sync the chemical registration system and/or plate information between ActivityBase or E-WorkBook. CSI ensures that critical data is transferred and synced with systems in third-party databases (e.g. between CROs and clients).

Label.Printer
With compatibility across a variety of software applications (including E-WorkBook), Label.Printer enables you to design and generate labels from any printer supporting PDF output.

Application.Insight
Identify, analyze, and visualize incident or performance issue root causes quickly. Application.Insight continuously collects information on all parameters and measures performance on servers and where users of monitored applications are located.

Study.Reporter
Create Microsoft Word files complete with data and charts from experiments as well as generate documentation for E-WorkBook templates.
