

Information.Portal

Many research organizations rely on a collection of individually focused systems, sources, and tools to collect information, assess performance, and make decisions. However, manually importing, exporting, and piecing this information together in a patchwork manner introduces inefficiency and elevates risk. **a-tune** Information.Portal automates data retrieval and availability and ensures standardized, safe, and secure access that meets your organization's requirements.

Key Features

- Use an intuitive end-user UI to navigate and browse data for compilation, query execution, and easy export
- Access E-WorkBook, ActivityBase, and other resources whenever needed using pull/push mechanism
- Apply queues and subscription filters for data attributes (e.g., experiment title, status)
- Ensures remote systems receive information in conformance with security policies
- Notify remote systems of new information via web service
- Make information available to data tools (e.g., Hadoop, Hana, Spotfire), corporate data warehouses, and related systems
