

Home Office

tick@lab streamlines and supports the management of Home Office protocols - from creation and submission by personal investigators, to review and approval by committee members. It overcomes known problems with "traditional" paper-based approaches to strengthen compliance risk mitigation. With tick@lab, organizations achieve transparency of humane animal treatment, safe laboratory conditions, and verification of proper training for all laboratory workers.

Effectively Manage Training Components

- Track and verify completion of required training for all protocol-involved personnel
- Connect to learning libraries and related compliance documents
- Create a catalog of pre-approved procedures with built-in comparison functionality
- Schedule and assign service requests and training tasks to individuals or groups

Improve Project Support and Reporting

- Generate standard and custom reports to meet regulatory and project-specific requirements
- Enable version control and comparison across protocol documents and statuses
- Pre-define statistical returns code information
- Follow standardized templates to capture all regulatory information
- Track and manage animal procedure numbers with built in alerts
- Link to the study plan

Ensure Information Accuracy and Access

- Query current and historical data in the project license history and save filtered views for instant access
- Configure e-mail notifications and alerts to support task completion and on-time actions
- Track and resolve animal welfare issues and streamline post-approval monitoring
- Integrate directly with animal management data for continuous visibility of animal status and numbers
- Create tailored and searchable forms (templates) to document adverse events, Post Approval Monitoring, and more

Streamline Processes and Secure Data

- Generate reports quickly and efficiently per project license and period
- Export data into the correct statistical returns format at the touch of a button
- Manage and generate EU Bred and unused reports
- Limit access to Project Licences defined per role
- Restrict access to animal data at a project or group level
